APPENDIX 10

EXAMPLES
IN DETERMINING LOT DEPTH

A = The distance between mid-points of straight lines connecting the foremost points of the side lot lines in front and the rearmost points of the side lot lines in the rear.

B = The perpendicular distance between a straight line connecting the foremost points of the side lot lines in front and a parallel line passing through the furthest most point of the lot.

A is the shortest

B is the shortest

B is the shortest   Same   A is the shortest
